## FOREWORD

The AIDS crisis has prompted all of us to look for information--the latest and best available--in fighting the epidemic. The National Library of Medicine, with its unparalleled collection, is an internationally available repository charged with collecting such information exhaustively.

For the Library simply to acquire these materials is obviously not enough to make them known or used. That is why the Library, which celebrated its 150th anniversary last year, has from its early years stressed dissemination of information as well as acquisition. Within the last three decades, the computer has become increasingly important in this regard. The Library's computer-based Medical Literature Analysis and Retrieval System (MEDLARS) was established to achieve rapid bibliographic access to NLM's vast store of biomedical information through online retrieval and the production of printed indexes like this present publication. MEDLARS databases are available for online searching from personal computers or computer terminals in the United States and through the International MEDLARS Centers throughout the world.

This bibliography takes into consideration the many facets of AIDS. Not only does it cover recent books and articles dealing with preclinical, clinical, epidemiologic, diagnosis, and prevention issues, it also contains references to works dealing with ethical concerns, educational strategies, public health administration, and other related issues.

The Library trusts that this bibliography, prepared specifically for the III International Conference on AIDS, will be useful in your work. We will continue to use our resources to the best of our ability to help you in the challenge ahead.

Donald A. B. Lindberg, M.D.  
Director  
National Library of Medicine

## ACKNOWLEDGEMENTS

The staff of the Reference Section wish acknowledge the valuable technical assistance of Alvin Barnes, Public Services Division, and Patricia Williams, Specialized Information Services.

## **AIDS BIBLIOGRAPHY:1986-1987**

This publication contains citations from all bibliographic databases of the National Library of Medicine for the period January 1986 through April 1987, specifically MEDLINE, BIOETHICSLINE, CANCERLIT, CATLINE, HEALTH PLANNING AND ADMINISTRATION, POPLINE, and TOXLINE. Citations are arranged alphabetically by author and are formatted according to the rules established for Index Medicus. A bracketed title indicates that the article is in a foreign language. For these titles, the language of publication is shown by a three letter abbreviation at the end of the citation.

This bibliography was prepared by staff of the National Library of Medicine in conjunction with the III International Conference on AIDS, held in Washington, D.C., on June 1-5, 1987. It is intended for distribution to attendees of the Conference and will not otherwise be available from the Library; however, it is not copyrighted and may be freely reproduced. Additional copies may also be obtained from the National Technical Information Service.
